

Definition: A **buffer** is a region of a physical memory storage used to temporarily store data while it is being moved from one place to another

Definition: A **delimiter** is a blank space, comma, or other character or symbol that indicates the beginning or end of a character string, word, or data item.

```
public class      FileInputStream      implements      InputStream      <Integer> {

    T next  () {

    }

    boolean  hasNext  () {

    }

    void close  () {

    }

}
```

```
public class      FileOutputStream      implements      OutputStream      <Integer>{

    void write(T input      ){

    }

    void close  () {

    }

}
```
